PrPages - Determines the coloured pdf-pages from the commandline!

The test-version ...

You can buy this commandline-exe for a really nice price.
This is the test-version. You can test the functionalities
and the returning values without paying for it.

In the full version the testversion-message is not included.
As an owner of the full version you can deliver/distribute this
exe unlimited without paying anything more as long as it is
included with your application/program.

How to call ...

Syntax 1: prpages drive:\path\file.pdf S drive:\path\file.csv
Syntax 2: prpages drive:\path\file.pdf E drive:\path\file.csv
Syntax 3: prpages drive:\path\file.pdf E drive:\path\file.csv 128
Syntax 4: prpages drive:\path\ S drive:\path\file.csv
Syntax 5: prpages drive:\path\ E drive:\path\file.csv
Syntax 6: prpages drive:\path\ E drive:\path\file.csv 64

The resulting csv-file could look like this:

An 8-pages-document (option E was used) ...

c:\temp\PrPages\samp1.pdf;1;792;612;color;
c:\temp\PrPages\samp1.pdf;2;792;612;color;
c:\temp\PrPages\samp1.pdf;3;792;612;color;
c:\temp\PrPages\samp1.pdf;4;792;612;color;
c:\temp\PrPages\samp1.pdf;5;612;792;color;
c:\temp\PrPages\samp1.pdf;6;612;792;color;
c:\temp\PrPages\samp1.pdf;7;612;792;color;
c:\temp\PrPages\samp1.pdf;8;792;612;color;

An 70-pages-document (option S was used) ...

c:\temp\PrPages\main.pdf;70;842;595;4;66

The options ...

Option S means only the total number of all coloured and non-coloured pages
...so you will get one csv-line for each pdf-document.
The content of the resulting csv-file look like this (Option S):
drive/path/filename ; pagecount ; first pageheight ; first pagewidth ; color-pages ;
bw/gray-pages

Option E means the properties from each page of a pdf-document
...so you will get one csv-line for each page of the analyzed pdf-document
The content of the resulting csv-file using option E:
drive/path/filename ; pagenumber ; pageheight ; pagewidth ; color or bw/gray

You can use a single pdf or a complete path to analyze all pdf-documents

There is an optional last numeric parameter at the end. Without it 128 will
be used automatically. If you want to change it, try values from 32, 64, 128,
192 up to 256 (means less performance).

The parameters

fname   = The path (with pdf-files) or a single pdf-file which shall be checked ...
soe   = S(um) or E(ach) page (having influence on the csv-output)
csv   = Drive, path and file.csv
pix   = The resolution making the checks more accurate (value 128 will be used
                automatically. 32, 64, 96, 128, 192, 256, ... are possible, too.

The errors

9001   the source-parameter is missing
9002   too much parameters
9003   the target (.csv) parameter is missing/wrong
9004   the target path is not valid
9005   parameter for resolution is not numeric
9006   parameters are missing
9007   no pdf-files in the path
9010   file could not be processed
9011   there is a user password on the file
9013   structure problems with the file
9014   dictionary problems with the file
