

Screen Popup V3.00

Written by Asa Margetts

Quick Start Guide...

Steps Overview

1. Set up shared folder which is accessible to all users/PC's
2. Run **Configurator** and point to shared folder
3. Use **Configurator** to install remote agent on PC's to receive message
4. Use **Sender** to send messages to those PC's

Steps Detail

- You need a central message staging area. Set up a Shared folder on a machine that all user's/PC's can read/write access
- Once setup, run **Screen Popup Configurator**
- Type the location of the shared folder in the format of \\servername\folder. Click **Apply Settings**
- Click **Step 2 – install Remote Agent**
- Type PC name or IP address of the machine you wish to install the remote agent onto. Make sure the logged in user has administrator access to this machine
- Click **Install**
- Once the remote machine reboots, it will be ready to receive messages
- Use **Screen Popup Sender** to send messages to all machines with agent on

Note

If you wish to have sender on more than one PC, once configured you can copy the sender.exe and screen_popup.ini to any computer you wish to send a message from. Stuck?
